Wet compress cotton pads are thin, sheet-like products specifically designed for facial compress treatments. By closely adhering to the face, they promote the penetration of active ingredients, offering hydration, soothing, and repairing benefits.

Facial compress pads are cotton sheets soaked in skincare ingredients, used for intensive localized treatments. Through short-term application, they hydrate, soothe, calm sensitive skin, or promote the absorption of active ingredients. When using them, it is important to cleanse the skin, choose a gentle liquid, and control the compress time (5-10 minutes) to avoid overuse that could damage the skin barrier.

The core upstream raw materials for wet compress cotton pads include natural cotton, viscose fiber, polyester, and non-woven fabric. Key auxiliary ingredients are serum components (hyaluronic acid, B5 panthenol, plant extracts, etc.). The downstream online channel share continues to increase.

Product upgrades: Ingredients are evolving towards higher activity and multifunctionality, such as probiotics and fermented extracts.

Technological innovation: The mask material is being iterated, with new materials such as hydrogel and bio-cellulose improving permeability and significantly enhancing adhesion and penetration.

In 2025, global sales of wet compress cotton pads reached 456 million units, with a production capacity of approximately 570 million units, an average selling price of US\$5.98 per unit, and an average gross profit margin of approximately 55.9%.
