Wet drum separator is a kind of equipment used for separation of mineral particles, which is often used in the separation process of magnetic minerals. It is mainly used to separate magnetic particles from mixtures. The wet drum separator consists of a rotating drum and a liquid supply system. Inside the drum there is a series of magnetic systems, such as permanent magnets or electromagnetic coils, which generate a magnetic field. The mixture is fed into the drum and forms a suspended liquid layer in the drum through the liquid supply system. Under the action of the rotating drum, the magnetic particles will be attracted by the magnetic force and move along the surface of the drum, and finally be collected.
