The Wet Magnetic Separator is a mineral processing device that separates magnetic particles from wet materials using magnetic force. Its working principle involves feeding a slurry containing both magnetic and non-magnetic particles into the separation zone of the separator, where a magnetic field is generated by the magnetic system. Magnetic particles are attracted to the surface of the magnetic poles under the magnetic force, while non-magnetic particles continue to flow with the slurry. As the separator operates, the attracted magnetic particles are carried out of the separation zone, achieving effective separation of magnetic and non-magnetic particles for subsequent mineral processing.
