Wet-process polyolefin separator for lithium battery is a key component for lithium-ion batteries. It is made of polyolefin materials (such as polyethylene or polypropylene) through a wet process. The separator is located between the positive and negative electrodes of the lithium battery, isolating the two electrodes and preventing internal short circuits in the battery. At the same time, it allows lithium ions to move freely between the positive and negative electrodes through the electrolyte, thereby maintaining the normal operation of the battery.
