Wet welding electrodes are specialized consumables used in underwater welding to join metal components directly in a wet environment, such as in submerged structures like pipelines, ship hulls, and offshore platforms. These electrodes are designed to maintain a stable arc and produce quality welds despite the challenging conditions underwater. They are typically coated with waterproof materials to prevent the electrode from dissolving or disintegrating in water and to shield the weld area from contamination.

The global Wet Welding Electrodes market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
