A wet wipe canister is a folded wet towel that is used to disinfect surfaces from viruses, germs, and other hazardous microorganisms. Textile materials such as thermoplastic fibers and cellulosic fibers are commonly used in wet wipes. The chemical makeup of wet wipes determines their overall function. Alcohol is most likely to be used as a component in the wipes as it is responsible for destroying hazardous germs, viruses, and other microorganisms. Ammonium chloride, in addition to alcohol and alkyl C12-18 dimethyl benzyl, is a popular constituent in bleach-free disinfection wipes.
