Abstracts

The global Wetting Cones market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Wetting Cone introduces a way to increase mixer efficiency while dry chemical is metered in with water to create a given solution. The Wetting Cone provides a large amount of surface area, along with adjustable mix rates, to achieve proper wetting techniques without clumping or clustering.

The use of electronic systems to control and monitor the Wetting Cone operation, such as the liquid flow rate, the gas pressure, the droplet size, and the temperature. These systems can also communicate with other devices and networks to enable remote control and data analysis. The improvement of the cone design and the nozzle configuration to optimize the gas-liquid interaction and reduce the pressure drop. Some models use a spiral cone that enhances the liquid film formation and distribution. Some models also use multiple nozzles that increase the gas-liquid contact area. The increase of the cone capacity and the rangeability to enhance the gas-liquid mixing capability and flexibility. Some models can handle up to 1000 m³/h of gas flow rate and have a rangeability of up to 10:1. The diversification of the liquid types that can be used by Wetting Cones, including water, oil, chemicals, solvents, and slurries. Some models can also handle viscous liquids, such as glycol, methanol, and resin.
