A tire roller is a machine that compacts the road with multiple pneumatic tires. The tire rollers use pneumatic tires, and the ground pressure can be changed by changing the inflation pressure. The tire-type road roller adopts hydraulic, hydraulic or mechanical transmission system, single-axis or all-axis drive, and three-point support of wide-base tire articulated frame structure. The compaction process has a kneading effect, so that the particles of the compacted layer are not damaged but embedded and evenly dense. Good maneuverability and fast speed.
