Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Wheel Set Presses are used to mount / dismount wheels and brake discs onto / from axles. The Wheel Set Presses will comprise a substantial steel frame with hydraulic cylinders to apply the necessary pressing loads. The function of the Wheel Set Presses depends on the required parameters of operation and the throughput required from the equipment. For high production rates, it is often necessary to have separate dedicated machines for each stage of the process, whereas for lower production rates, all of the functions can be integrated into a single machine.
