Whole house UV water purification system is mainly used to sterilise bacteria and viruses by causing them to be irradiated by UVC light, the energy of the UVC spectrum is absorbed by the nucleus of the cell, causing its nucleic acid structure to be destroyed, thus causing various bacteria and viruses to lose their ability to replicate and reproduce, achieving a sterilising effect. UVC disinfection is a physical method, no chemicals are added to the disinfection process and there is no secondary pollution to the water and surrounding environment (including the air).
