The global Whole House Water Treatment System market size is predicted to grow from US$ 1992 million in 2025 to US$ 2598 million in 2032; it is expected to grow at a CAGR of 3.9% from 2026 to 2032.

In 2024, global sales of Whole House Water Treatment System reached approximately 1.6 million units, with an average market price of about USD 1,200 per unit, an annual production capacity of roughly 2 million units, and an industry-average gross margin of approximately 28%.

A whole house water treatment system is installed at the main inlet of the building (residential or commercial) and treats all potable water entering the premises—covering kitchen, bathing, laundry, drinking, and other uses. Unlike point-of-use devices (e.g. faucet filters), the whole house system filters and purifies the entire water supply. It typically comprises multi-stage pretreatment, activated carbon adsorption, membrane filtration (reverse osmosis or ultrafiltration), UV/ozone disinfection, water softening resin modules, and smart sensors to meet user demands for water quality, safety, taste, and appliance protection.

In the supply chain, upstream includes membrane and filter media manufacturers, activated carbon and resin producers, UV/ozone unit makers, and sensor/component suppliers; downstream serves real estate developers, home improvement firms, end users (homeowners), and after-sales service providers, handling product sales, installation, filter replacement, maintenance, and support.
