Wide Area Coordinate Measuring Machine (WACMM) is a large-scale metrology system that is used to measure the dimensions, geometries, and surface characteristics of very

large parts or structures. Unlike traditional CMMs that have a limited measurement range, a WACMM can cover an expansive area and measure large parts with high accuracy. These machines use a combination of laser scanning, photogrammetry, and other non-contact measurement methods to capture data from the surface of the object being measured. The collected data points are then processed and analyzed by specialized software to generate a detailed and precise 3D model of the part or structure.
