WiFi expansion devices are devices to improve WiFi coverage. It works by receiving your existing WiFi signal, amplifying it and then transmitting the boosted signal. With a WiFi repeater you can effectively double the coverage area of your WiFi network - reaching far corners of your home or office, different floors, or even extend coverage to your yard. Using Wi-Fi expansion devices, you can bridge these dead spots and provide a solid signal throughout your facility.

A wireless network uses radio waves to communicate with portable devices, granting them access to other connected devices and to the Internet. Many factors can affect the strength of these radio waves, and you may find dead spots in your office network where you cannot connect.
