The global Wildland Firefighting Gloves market size is predicted to grow from US$ 173 million in 2025 to US$ 262 million in 2032; it is expected to grow at a CAGR of 6.2% from 2026 to 2032.

Wildland Firefighting Gloves are specialized protective gloves designed for firefighters working in forest, grassland, and wildland environments, where exposure to flames, embers, radiant heat, and rough terrain is constant — but where flexibility, breathability, and dexterity are just as important as heat resistance.

They differ significantly from structural firefighting gloves, which are heavier and designed for interior building fires. Wildland gloves must strike a balance between thermal protection, grip, mobility, and comfort during prolonged outdoor operations.

In 2024, global Wildland Firefighting Gloves sales volume reached approximately 5.27 million pairs, with an average global market price of around 30.5 US$ per pair.
