The global Wildlife Health market size is predicted to grow from US\$ 2826 million in 2025 to US\$ 5530 million in 2032; it is expected to grow at a CAGR of 10.3% from 2026 to 2032.

The increasing number of emerging & re-emerging zoonotic diseases from wild animal origins, growing government intervention in protecting wildlife Animal health by acknowledging its interconnectedness with human health, collaboration framework of multiple public sectors to promote wildlife conservation with funded programs, and growing establishments of national parks, zoos, and animal protection sanctuaries with standardized animal care.

Organizations, such as OIE (World Organization for Animal Health), have been striving for over a decade to support & improve wildlife health. Their key figures indicate that around 40% of amphibians, 25% of mammals, and 14% of birds are under threat of extinction. To mitigate this, several steps have been taken by governments of various countries along with key wildlife organizations, such as the World Wildlife Fund (WWF), Wildlife Conservation Society (WCS), International Union for Conservation of Nature (IUCN), and National Resources Defense Council, Inc. among others, thereby protecting wild animals. In addition, OIE also states that 72% of the emerging infectious diseases around the world have a wildlife origin.
