The global Wind Power Drone Inspection Service market size is predicted to grow from US\$ 1001 million in 2025 to US\$ 3573 million in 2032; it is expected to grow at a CAGR of 20.1% from 2026 to 2032.

Wind power drone inspection service refers to the use of commercial industrial-grade drones equipped with sensors such as visible light, infrared, and lidar to conduct fully automated aerial inspections of blades, towers, nacelles, foundations, and power collection lines while the wind turbine is in operation. It collects real-time data on defects such as cracks, corrosion, loose bolts, and thermal anomalies. Cloud-based AI automatically generates defect reports and maintenance work orders, providing wind farms with 'non-stop + high-precision' intelligent operation and maintenance outsourcing services.

In 2025, the gross profit margin of wind power drone inspection services was 30%–38%, slightly higher than photovoltaic but lower than grid-connected services. This is mainly due to the complex operating environment of offshore wind power, the high technical threshold of non-stop blade operation, and customers' sensitivity to power generation losses, resulting in limited price premiums.

United States market for Wind Power Drone Inspection Service is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Wind Power Drone Inspection Service is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
