The global Wind Power Forecasting market size is predicted to grow from US\$ 334 million in 2025 to US\$ 544 million in 2032; it is expected to grow at a CAGR of 7.3% from 2026 to 2032.

Wind power forecasting is a technology and service that predicts the output power and generation volume of wind farms or regional wind power clusters over specific future timeframes. It utilizes data from Numerical Weather Prediction (NWP), wind speed and direction observations, meteorological towers or LiDAR, wind farm SCADA systems, and historical generation records, while integrating physical models, statistical models, machine learning, and artificial intelligence algorithms.

The Wind Power Forecasting market is primarily driven by the continued expansion of global wind power capacity, accelerating offshore wind development, rising penetration of wind generation in power systems, and the increasing marketization of electricity trading. Because wind power output is highly dependent on wind speed, wind direction, and changing weather systems, its inherent variability creates greater balancing and scheduling challenges as wind generation represents a larger share of the power mix, increasing demand from utilities and grid operators for more accurate, high-frequency, and continuously updated forecasts. At the same time, the growth of day-ahead, intraday, and real-time electricity markets is making forecasting accuracy increasingly important to imbalance costs and trading profitability. In addition, the development of large-scale wind power bases, offshore wind clusters, centralized multi-site operations, energy storage, and virtual power plants is expanding forecasting requirements from individual wind farms to portfolio and regional levels, while advances in high-resolution NWP, LiDAR, real-time SCADA data, cloud computing, artificial intelligence, and machine learning continue to improve forecast accuracy and automation, supporting

wind power forecasting as a core digital capability for wind operations, grid management, and electricity trading.
