Wind Power Planetary Gearbox is an important mechanical components, and its main function is to wind round the momentum generated by wind is passed to the generator and make the appropriate speed. Usually wind wheel speed is very low, far less than required by the generator speed, the growth rate effect of the gearbox gear vice, so the gearbox will also be called a growth box. According to the general layout of the unit, sometimes the wind turbine wheel is directly connected to the drive shaft (commonly known as the shaft) and the gear box together as one, shaft and gearbox are arranged, during which the tension device or coupling connected structure. Brakes in order to increase the braking capacity of the unit, often set in the input or output of the gearbox, with the tip brake (fixed pitch wind wheel) or pitch from the brake to the unit drive system combined braking.
