According to our LPI (LP Information) latest study, the global Wind Power Systems market size was valued at US\$ million in 2023. With growing demand in downstream market, the Wind Power Systems is forecast to a readjusted size of US\$ million by 2030 with a CAGR of % during review period.

The research report highlights the growth potential of the global Wind Power Systems market. Wind Power Systems are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Wind Power Systems. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Wind Power Systems market.

The global energy transition is one of the major trends being witnessed in the market. The power sector around the globe is undergoing a major transition as power generation from fossil fuels is slowly being replaced with renewable sources. The need to reduce the carbon footprint has resulted in many countries implementing renewable energy-specific targets and policies. In addition to policies, the rapidly decreasing cost of renewable technologies, particularly solar and wind, has led to a continuous increase in the production of energy from renewable sources.

According to the Global Wind Report 2023 released by the Global Wind Energy Council, by 2024, the newly installed capacity of global onshore wind power will exceed 100GW for the first time; by 2025, the newly installed capacity of global offshore wind power will

also reach 25GW. In the next five years, the newly added grid-connected capacity of wind power will reach 680GW. The report also shows that the United States and Europe may experience a supply bottleneck of wind turbines and components in 2025. It recommends that national policymakers take immediate action to increase investment in supply chains to meet their rapid growth in demand and avoid supply chain bottlenecks hindering the development of wind power. In addition, according to Wood Mackenzie statistics, China is the largest and fastest-growing market for wind power generation in the world, accounting for more than half of the market share. Data from the National Energy Administration of China also shows that China's installed wind power capacity ranks first in the world, with a capacity of nearly 400 million kilowatts.
