A wind speed meter, also known as an anemometer, is a device used to measure the speed and direction of wind. It consists of multiple cups or blades that rotate when exposed to wind. The rotation of these cups or blades is then converted into an electrical signal, which is used to calculate the wind speed. Some advanced wind speed meters also include additional sensors to measure other weather parameters such as temperature, humidity, and barometric pressure. Wind speed meters are commonly used in meteorology, aviation, environmental monitoring, and various outdoor activities.
