According to our LPI (LP Information) latest study, the global Wind Turbine Components market size was valued at US\$ 126510 million in 2023. With growing demand in downstream market, the Wind Turbine Components is forecast to a readjusted size of US\$ 172670 million by 2030 with a CAGR of 4.5% during review period.

The research report highlights the growth potential of the global Wind Turbine Components market. Wind Turbine Components are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Wind Turbine Components. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Wind Turbine Components market.

The global fossil fuel dependency is expected to cause significant social and economic fluctuations. An economy that is based on fossil fuel is highly unsustainable. The efforts taken to reduce such an impact and reduce its usage and dependence has paved way for alternate and renewable sources of energy. Alternate sources, such as wind energy, is one of the most sought after options since it is the least expensive power generating option. Increasing number of locations for capacity additions in newer markets such as Africa, Asia, Central, and South America is driving the wind power generation. Both onshore and offshore wind power generation have contributed to the improvement of wind energy's economics in varied operating conditions and wind regimes.

According to the Global Wind Report 2023 released by the Global Wind Energy Council,

by 2024, the newly installed capacity of global onshore wind power will exceed 100GW for the first time; by 2025, the newly installed capacity of global offshore wind power will also reach 25GW. In the next five years, the newly added grid-connected capacity of wind power will reach 680GW. The report also shows that the United States and Europe may experience a supply bottleneck of wind turbines and components in 2025. It recommends that national policymakers take immediate action to increase investment in supply chains to meet their rapid growth in demand and avoid supply chain bottlenecks hindering the development of wind power. In addition, according to Wood Mackenzie statistics, China is the largest and fastest-growing market for wind power generation in the world, accounting for more than half of the market share. Data from the National Energy Administration of China also shows that China's installed wind power capacity ranks first in the world, with a capacity of nearly 400 million kilowatts.
