According to our LPI (LP Information) latest study, the global Wind Turbine Drivetrain market size was valued at US\$ million in 2023. With growing demand in downstream market, the Wind Turbine Drivetrain is forecast to a readjusted size of US\$ million by 2030 with a CAGR of % during review period.

The research report highlights the growth potential of the global Wind Turbine Drivetrain market. Wind Turbine Drivetrain are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Wind Turbine Drivetrain. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Wind Turbine Drivetrain market.

Wind turbine drivetrain is composed of gearbox and generators that convert rotational energy of blades into electrical energy. It connects the low-speed shaft attached to turbine blades to high-speed shafts attached to the generator.

Wind turbine drivetrain converts kinetic energy at low rotational speed to medium/high rotational speed with the help of the gearbox. It then converts kinetic energy into electrical energy with the help of an electric generator.

According to the Global Wind Report 2023 released by the Global Wind Energy Council, by 2024, the newly installed capacity of global onshore wind power will exceed 100GW for the first time; by 2025, the newly installed capacity of global offshore wind power will

also reach 25GW. In the next five years, the newly added grid-connected capacity of wind power will reach 680GW. The report also shows that the United States and Europe may experience a supply bottleneck of wind turbines and components in 2025. It recommends that national policymakers take immediate action to increase investment in supply chains to meet their rapid growth in demand and avoid supply chain bottlenecks hindering the development of wind power. In addition, according to Wood Mackenzie statistics, China is the largest and fastest-growing market for wind power generation in the world, accounting for more than half of the market share. Data from the National Energy Administration of China also shows that China's installed wind power capacity ranks first in the world, with a capacity of nearly 400 million kilowatts.
