In 2024, the global production of Wind Turbine Nacelle & Spinner Covers will reach 82,500 sets, with an average selling price of US$8,579.66 per set. The cost is approximately $4,585.83 per set, with a gross profit margin of 23.84%-32%. The single-line production capacity is 250 sets. Upstream raw material suppliers: Glass fiber products include Shandong Fiberglass Group Co., LTD., China Jushi Co., Ltd., Sinoma Science & Technology Co., Ltd., etc.; structural core materials include Diab, Maricell, 3A Composites GmbH, China Resources Chemical Innovative Materials Co., Ltd., Changzhou Tiansheng New Materials Group Co., Ltd., Hunan ESOL Composites Co., Ltd., etc. Wind turbine covers are used to house and protect the internal equipment of wind turbines, preventing damage from rain, dust, and ultraviolet rays. Nacelle Covers are protective devices for the wind turbine's outer shell. These large shells offer high strength and load-bearing capacity. Installed atop the tower, they provide excellent protection for the wind turbine, extending its lifespan and improving its operational stability and efficiency, thereby reducing the cost of wind power. Spinner Covers are protective devices for the wind turbine's hub. These spherical structures, each with three openings, are installed at the rotational center of each of the three blades to protect the blade root connection. They also utilize aerodynamic principles to guide airflow smoothly across the blade root and hub surface, reducing wind resistance and eddy current losses, and improving the wind turbine's power generation efficiency.
