Abstracts

According to this study, the global Window Dressings market size will reach US\$ million by 2031.

Scientists at the Lighting Research Center (LRC), in Troy, New York, US, have reported that naturally lit homes enhance the occupants' comfort and productivity, and provide the mental and visual stimulation necessary to regulate human circadian rhythms. Interior designers and architectures plan houses in such way that maximum amount of natural light penetrates the interiors. However, excessive lights can be troublesome and hence there should be a proper light balance. Also, windows cannot be kept wide open all day as it reduces privacy, increases heat gain/loss, and creates glaring problems. Window dressing products are helpful to counter such problems.

The growing interest in fashionable home decor and an increase in disposable income of consumers is propelling the demand for window dressing products worldwide.
