Windows Mobile POS Terminal is an electronic device supporting Windows Mobile operating system, it is used to process card payments at retail locations. A POS terminal generally does the following: Reads the information off a customer's credit or debit card. Checks whether the funds in a customer's bank account are sufficient, after the payment is provided, the merchant can issue a receipt for the transaction, which is usually printed, but is increasingly exempted or electronically sent. Most POS Terminals is designed with touch screen function.

MPOS implementations allow service and sales industries to conduct financial transactions in place, improving the customer experience (CX) and freeing up valuable real estate that would otherwise be dedicated to a POS countertop. An MPOS can also be cost-effective, allowing a small business owner to conduct transactions without having to invest in an electronic register or pay someone to support the software.
