With a windshield head-up display, the driver sees a virtual image, but instead of a flat static picture on the windshield, it 'floats' on the hood for a distance of about two meters. In the case of an augmented reality head-up display, information from the windshield HUD adds a layer of information to the street in front of the car, displaying information exactly where it is needed within the line of sight. The driver can get all the important information, such as speed, warning signals and navigation indicator arrows, without having to look down at the instrument cluster or auxiliary display.
