Windshield Camera Recalibration Service is a specialized service offered by automotive service providers to ensure that the vehicle's advanced driver assistance systems (ADAS) are functioning correctly after windshield replacement. Modern vehicles often have advanced driver assistance systems that rely on these cameras for features like lane-keeping assist, adaptive cruise control, and collision avoidance. Recalibration might be needed after a windshield replacement, major vehicle repairs, or if you notice that the ADAS features are not performing as expected. The service ensures that the cameras are correctly positioned and that their sensors are accurately reading the road and surroundings. This helps maintain the safety and functionality of your vehicle's advanced systems. It's important to note that not all windshield replacements require camera recalibration. The need for recalibration depends on the specific vehicle and its ADAS systems.
