Wine capsule machines are devices designed to produce capsules for wine bottles, mainly used for sealing and decorating wine bottles. First, the machine unwinds the heat - shrink film material. Then, through a series of mechanisms such as shaping and seaming, the film is formed into a tubular shape that fits the size of the wine bottle mouth. Next, the film - wrapped bottle mouth is heated by a heat - shrinking device, causing the film to shrink and tightly wrap around the bottle mouth to form a sealed capsule. They are mainly used for the packaging of red wine, white wine, champagne, sparkling wine, and other wines, which play a role in protecting the wine from oxygen and moisture and improving the appearance of the wine bottle.

United States market for Wine Capsule Machines is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
