Wing-in-Ground (WIG) Craft is a high-speed vehicle designed to utilize the ground effect, a phenomenon where an aircraft flying close to a surface experiences increased lift and reduced drag due to compressed air between its wings and the surface. Operating just above water or land, WIG crafts combine the speed of airplanes with the load-carrying capacity of ships, making them ideal for short-distance transportation, maritime patrols, and rescue missions. While highly fuel-efficient and stable, their usage is limited by terrain and weather conditions, primarily suited for calm and open environments like seas or large lakes.
