The global Wing Inspection and Taxi Lighting Upgrade Kits market size is predicted to grow from US\$ 29.85 million in 2025 to US\$ 47.02 million in 2032; it is expected to grow at a CAGR of 6.8% from 2026 to 2032.

Wing inspection and taxi lighting upgrade kits are certified retrofit assemblies designed to replace legacy halogen, HID, or incandescent lighting units on in-service aircraft with modern LED technology. These kits typically include wing inspection lights (also used for ice inspection during preflight checks), taxi lights, and associated mounting hardware, drivers, controllers, and STC/PMA certification documentation. Unlike factory line-fit exterior lighting, upgrade kits are sold through aftermarket channels and are installed during scheduled maintenance or MRO visits. Key benefits include longer service life, reduced maintenance frequency (eliminating repeated bulb changes), lower current draw, and improved illumination quality. The market segments by light source (LED, HID, halogen), aircraft type (business jets, commercial jets, turboprops, rotorcraft), kit scope (combined, taxi-only, wing-only), sales channel (aftermarket retrofit, OEM spares, MRO bundled), and certification route (STC kits, PMA upgrades, OEM-approved). From a value chain perspective, upstream includes LED chip suppliers, optical component manufacturers, and power supply/driver producers; midstream involves kit assembly, certification application (STC, PMA), and packaging; downstream spans aircraft operators, MRO providers, and aftermarket distributors. In 2025, the average selling price is approximately US\$4,500 per kit, global sales volume is about 6.78k units, and gross margins generally range from 25% to 35%, driven by certification costs, LED component quality, and aircraft-specific installation requirements.
