## Abstracts

The global Winter Pool Pillow market size is predicted to grow from US\$ 20.15 million in 2025 to US\$ 25.75 million in 2032; it is expected to grow at a CAGR of 3.6% from 2026 to 2032.

In 2024, the global production of winter pool pillow was approximately 800,000 to 1.5 million units, with an average selling price of approximately US\$8 to US\$25 per unit and a gross profit margin of approximately 40%. Single-line production capacity was approximately 300,000 to 600,000 units per year. A winter pool frost protection pillow is an inflatable airbag placed between the pool surface and the pool walls. By absorbing the pressure of ice expansion, it provides crucial structural protection for the pool in winter and is an important component of the pool's winter covering system. The upstream of the winter pool frost protection pillow industry mainly consists of the chemical industry, responsible for producing PVC, PEVA, and other plastic granules and valve fittings; the midstream consists of pool equipment manufacturers, who process raw materials into final products through blow molding, welding, and other processes, and then market them under their brands; the downstream sells to end users through pool supply stores, online platforms, and other channels. Its demand stems from geographical climate and product function: in cold, icy regions, owners of above-ground swimming pools must use it to counteract the pressure of ice to prevent damage to the pool walls, which is a rigid protection requirement; at the same time, it also supports the pool cover to drain rain and snow, extending the life of the pool cover, and its bright color serves as a safety warning. These additional functions together reinforce its necessity in specific markets and user groups.
