Wire Electrical Discharge Machining (EDM) Service is a process where an electric current is passed through a very thin wire, which is then discharged to shape the surface of the metal being processed. This technique operates similarly to a saw, but with high precision.

EDM Service can process any conductive material, regardless of its hardness. Commonly used materials include iron, stainless steel, copper, aluminum, and brass. The wires used in EDM are extremely thin, ranging from 0.02 mm to 0.3 mm in diameter, enabling intricate and precise shaping that is challenging with conventional machining methods.

The global Wire Electrical Discharge Machining (EDM) Service market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
