The global Wire Flexing Tester market size is predicted to grow from US$ 29.17 million in 2025 to US$ 41.85 million in 2032; it is expected to grow at a CAGR of 5.4% from 2026 to 2032.

In 2024, the global production of Wire Flexing Tester was approximately 13,500 units, with an average selling price of about US$2,100 per unit. Single-line capacity was approximately 800 units per year, with an average gross profit margin of about 30%. Wire Flexing Tester is a device used to test the mechanical strength (especially bending durability) of wires and cables. It tests the wire's durability under dynamic bending conditions by applying a fixed load to one end of the wire and bending the other end repeatedly within a certain range a certain number of times. This test is crucial for assessing whether the wires in products such as plug pins, power cords, and headphone cables will break due to frequent bending.

Upstream core raw materials and components mainly include steel, stepper/servo motors, precision sensors, PLCs, and various electronic components. Downstream applications are highly concentrated, primarily serving wire and cable manufacturers and third-party quality testing institutions, and also applied in end-product manufacturing industries such as home appliances, automobiles, and rail transportation, which have strict requirements for cable durability.

United States market for Wire Flexing Tester is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
