A Wire-free FFR System is a non-invasive or minimally invasive diagnostic system that estimates the physiological significance of coronary artery stenosis without the use of pressure guidewires or hyperemic agents. It leverages coronary angiography or CT imaging combined with computational fluid dynamics (CFD) to simulate coronary blood flow and calculate fractional flow reserve (FFR) or equivalent values such as QFR or FFR-CT. These systems offer a safer, faster, and more accessible alternative to traditional wire-based FFR, supporting clinical decision-making in both catheterization labs and imaging departments.
