The wire harness terminal crimping Machine is an automated device designed to accurately crimp metal terminals to the ends of wires or cable harnesses. It is widely used in automotive, home appliances, industrial control, power equipment, and communications industries that have extremely high requirements for wire harness connection quality. The equipment uses precision molds and a constant pressure system to stably connect the wire harness to the terminal to ensure conductivity, mechanical strength, and durability. It is usually equipped with automatic feeding, wire cutting, stripping, positioning, and visual recognition functions to achieve high-speed, high-consistency operations. Modern high-end models often integrate servo drives, force control feedback, quality tracking, and MES system interfaces, supporting a variety of terminal specifications, crimping modes (such as closed, flag, and open), and multi-core harness operations. It is an important basic equipment for automated and intelligent wire harness manufacturing.
