Wire rope encoder is a measuring device that converts linear displacement into electrical signal output. It is widely used in industrial automation, engineering machinery, lifting equipment, storage systems, test platforms, etc. Its basic structure includes a freely retractable high-strength wire rope, a spring rewinding mechanism and a rotary encoder. When the object being measured moves, the wire rope is pulled and drives the encoder shaft to rotate, thereby outputting an electrical signal proportional to the displacement, such as analog voltage, current or digital pulse signal.
