The global Wired Computer Mice market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

A wired computer mouse is a mouse device that is connected directly to the computer via a cable. Unlike a wireless mouse, it does not rely on wireless signals, but rather transmits signals through a physical cable for user input and computer interaction.

The industry trend of wired mice is gradually shifting towards wireless alternatives as technology improves and consumers demand more flexibility and mobility in their computing setups. However, wired mice continue to be popular among gamers and professionals who prioritize precision and instantaneous response times in their work or gaming.
