An wireless acoustic glass break detector is a safety device designed to detect the sound of breaking glass. It is often used as part of a larger alarm system to increase the security of a building or home. The device is able to detect the specific frequency of glass shattering, unlike other sounds and noises commonly found in buildings. When the sound of shattering glass is detected, the detectors send a signal to the alarm system, triggering an alarm and alerting the owner or monitoring company of a possible break-in. Acoustic glass break detectors are often placed near windows or glass doors

where intruders may try to gain access.
