The global Wireless Bras market size is predicted to grow from US\$ 994 million in 2025 to US\$ 1697 million in 2032; it is expected to grow at a CAGR of 8.1% from 2026 to 2032.

Wireless bras, also known as soft cup bras or non-wired bras, are a type of bra that lacks the traditional underwire support found in many conventional bras. Instead of relying on underwire, these bras are designed with softer, more flexible materials to provide support and shape to the breasts.

Rising Demand for Comfort: The lingerie market has seen a growing demand for comfortable and everyday wear. Many consumers are prioritizing comfort over traditional aesthetics, leading to increased interest in wireless bras that provide a more relaxed fit.

Inclusive Sizing: The industry has been moving toward greater inclusivity, recognizing the diverse body shapes and sizes of consumers. Brands offering wireless bras have increasingly expanded their size ranges to cater to a broader customer base.

Athleisure Influence: The popularity of athleisure wear has influenced lingerie trends, including the preference for wireless bras. Consumers appreciate the comfort and versatility of wireless options, making them suitable for both active and casual wear.

Natural Body Movement: As body positivity movements gain traction, there's a growing acceptance and celebration of natural body shapes. Wireless bras contribute to this trend by allowing the breasts to maintain a more natural shape and movement.
