The global Wireless Carbon Dioxide Sensor market size is predicted to grow from US\$ 1845 million in 2025 to US\$ 4021 million in 2032; it is expected to grow at a CAGR of 12.0% from 2026 to 2032.

A Wireless Carbon Dioxide Sensor is a device that is designed to measure and monitor carbon dioxide (CO₂) levels in an environment and transmit this data wirelessly to a central monitoring system or device. CO₂ sensors are commonly used in various applications, including indoor air quality monitoring, HVAC systems, industrial processes, and environmental monitoring. The wireless capability of these sensors allows for remote and real-time monitoring without the need for physical connections.

The development of wireless CO₂ sensors for use in precision machinery and automation applications, including semiconductor manufacturing, medical devices, and industrial automation, has been an important area of research and development in recent years as a result of the growing interest in the development and study of wireless CO₂ sensors. Wireless carbon dioxide (CO₂) sensors are sensors that are used to detect the concentration of CO₂ in the environment, and they typically use wireless technology to transmit data, facilitating real-time monitoring and remote data acquisition. The demand for wireless CO₂ sensors has increased with the rising concern about indoor air quality and environmental pollution. They are widely used in indoor environments such as offices, schools, healthcare facilities, and residences to ensure that air quality meets health and safety standards. In commercial and industrial facilities, wireless CO₂ sensors are used in energy management systems to optimise the performance of heating, ventilation and air conditioning (HVAC) systems. This helps to save energy and reduce operating costs. Overall, wireless CO₂ sensors play a key role in a number of areas and continue to improve their performance and functionality as

technology advances and market demand increases. These sensors help to achieve smarter, healthier and more energy efficient environments.
