The report requires updating with new data and is sent in 48 hours after order is placed.

The global Wireless Charging Chipset market size is predicted to grow from US$ 38.2 million in 2025 to US$ 72.3 million in 2031; it is expected to grow at a CAGR of 11.2% from 2025 to 2031.

The latest Qi2 wireless charging standard from the WPC is optimized based on Apple's MagSafe, utilizing the MPP (Magnetic Power Profile) protocol. It makes wireless charging more user-friendly in terms of alignment and usage, offering better compatibility and charging efficiency. The WPC has standardized and integrated authentication verification to enhance practicality and convenience, further promoting the widespread adoption of wireless charging.

Qi2 certification requires products to include both EPP (Extended Power Profile) and MPP transmission areas, and they must incorporate authentication. Single BPP (Baseline Power Profile) wireless chargers cannot obtain Qi2 certification, and in multi-coil wireless chargers, while BPP can be included, there must be at least one EPP or MPP.
