Abstracts

The global Wireless Charging Solutions for Consumer Electronics market size is predicted to grow from US$ 54780 million in 2025 to US$ 107960 million in 2032; it is expected to grow at a CAGR of 10.4% from 2026 to 2032.

Wireless Charging Solutions for Consumer Electronics refer to the system-level and component-level technologies enabling contactless energy transfer for smartphones, smart wearables, TWS earbuds, tablets, and compact household electronics. The solutions typically adopt inductive charging, magnetic resonance, or RF-based wireless power transfer architectures. Core elements include the transmitter (Tx) module, receiver (Rx) module, coils, magnetic materials, power management ICs, communication and control protocols (Qi, Qi2, PMA, etc.), and integrated mechanical designs optimized for end-devices. Wireless charging enhances user convenience, reduces port abrasion, improves waterproof and dustproof performance, and provides greater industrial design flexibility.

With Qi2 (magnetic alignment) becoming widely adopted by major smartphone and wearable OEMs, wireless charging solutions are evolving toward higher power density, improved efficiency, reduced thermal loss, and multi-device interoperability. The supply chain spans magnetic materials, coils, and PMICs upstream; module assembly and integration at the midstream; and consumer electronics brands downstream. Wireless charging is now a strategic differentiator in device design and accelerates the transition toward port-less, seamless product form factors.
