## Abstracts

The global Wireless Fire Detection market size is predicted to grow from US\$ 1356 million in 2025 to US\$ 2151 million in 2032; it is expected to grow at a CAGR of 7.0% from 2026 to 2032.

Wireless Fire Detection refers to fire detection systems that use wireless technology to transmit signals from smoke, heat, or flame detectors to a central control unit. Unlike traditional fire detection systems that rely on wired connections, wireless systems communicate via radio frequencies. This makes installation easier and more flexible, especially in buildings where running wires is difficult or expensive. Wireless fire detection systems can be part of a larger smart building infrastructure, offering real-time monitoring, automatic alerts, and integration with other safety or security systems.
