The report requires updating with new data and is sent in 48 hours after order is placed.

The global Wireless Optical Module market size is predicted to grow from US$ 2269 million in 2025 to US$ 4612 million in 2031; it is expected to grow at a CAGR of 12.6% from 2025 to 2031.

The optical module is packaged by multiple optical devices, including optical emitting components (TOSA, including laser chips), optical receiving components (ROSA, including detector chips), drive circuits and optoelectronic interfaces, heat conduction frames, metal casings, etc. Optical modules can be classified according to packaging type, transmission rate, laser type, wavelength, application scenarios, etc. The higher the transmission rate, the more complex the structure of the optical module, which requires different packaging methods.

Optical modules can be divided into access optical modules, wireless optical modules, transmission optical modules and data center optical modules in different application fields. Wireless optical modules are usually used in base stations (such as 5G base stations/4G base stations). Common ones include 10G, 25G, 100G and 200G series optical modules.

Globally, leading optical module companies include Coherent, InnoLight, Cisco, Huawei, Accelink, Hisense, Eoptolink, HGG, Intel and Source Photonics, with the top 5 companies accounting for 56% of the market.
