Wireless pacemaker programmers can establish a connection with the pacemaker outside the body through wireless communication technology and transmit preset parameters to the inside of the pacemaker. These parameters include pacing frequency, output voltage (or current), sensing sensitivity, etc., which determine the working mode and performance of the pacemaker. Doctors can use wireless pacemaker programmers to personalize and adjust the parameters of the pacemaker according to the patient's specific situation and needs. Wireless pacemaker programmers are widely used in the treatment and management of cardiovascular diseases. It is particularly suitable for patients who need to adjust pacemaker parameters regularly, such as pacemaker-dependent patients and patients with arrhythmias. Through the wireless pacemaker programmer, doctors can monitor the patient's pacemaker working status and ECG data in real time, and promptly discover and deal with potential problems, thereby ensuring the patient's safety and treatment effect.
