The wireless robot floor scrubber is an automated cleaning equipment that uses robotics and wireless communication technology to complete floor cleaning tasks without manual intervention. It usually includes a chassis, cleaning brush, water absorber and other components, and performs cleaning operations on the ground through preset routes and procedures. The working principle of the wireless robot floor scrubber is to sense the surrounding environment in real time through sensors such as lasers, infrared rays or cameras, draw maps and plan cleaning paths. Then use a cleaning brush to scrub, and at the same time, the water absorber sucks the sewage into the water storage tank, and finally completes the cleaning of the floor. At the same time, wireless communication technology allows operators to monitor and control the working status of the robot through remote control or preset programs. Wireless robot floor scrubbers usually have the characteristics of high efficiency, intelligence, and energy saving. They can improve the efficiency and quality of cleaning operations, reduce labor costs and labor intensity, and are widely used in floor cleaning work in commercial, industrial, medical, hotels and other places.

The global Wireless Robotic Floor Scrubber market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
