Wireless smart doorbell is an internet-connected replacement for a traditional doorbell. It can “ring” a smartphone or other device in our home, and integrate with a smart home automation system to display real-time video from our front door. Note that “smart doorbell” is virtually synonymous with “video doorbell” because most have video cameras included. Smart doorbells are basically security cameras with additional door-answering features, so here are some smart doorbell security camera functions. Smart doorbell cameras with AI (artificial intelligence) person recognition can filter out “false positives” so we don’t get a bunch of motion alerts for tree branches on a windy day. More advanced AI systems are not only better at recognizing people versus general motion, but can even identify familiar faces and package deliveries.
