The wire-wound platinum resistance sensor is a resistance sensor made of platinum wire. Platinum is a rare metal with good chemical stability, high temperature oxidation resistance and precise resistance temperature characteristics. Wirewound platinum resistance sensors are usually made in the form of wirewounds, and a resistive element is formed by winding a platinum coil on an insulating material. When the sensor is subjected to temperature changes, the resistance value of the platinum resistor will also change, so that the temperature can be determined by measuring the resistance value. Wire-wound platinum resistance sensors have the advantages of high accuracy, good stability, and fast response, and are widely used in the field of temperature measurement and control.

The global Wirewound Platinum Resistance Sensor market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
