A variable resistor, a resistor whose resistance value can be adjusted, used when the circuit current needs to be adjusted or when the resistance value needs to be changed. The potentiometer can change the characteristics of the signal generator, dim the lights, start the motor or control its speed. The wire-wound variable resistor is a power resistor with the advantages of low noise, high-temperature resistance, and large load current. It is mainly used to adjust the voltage or current of various low-frequency circuits.
