According to our LPI (LP Information) latest study, the global WLAN market size was valued at US\$ million in 2023. With growing demand in downstream market, the WLAN is forecast to a readjusted size of US\$ million by 2030 with a CAGR of % during review period.

The research report highlights the growth potential of the global WLAN market. WLAN are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of WLAN. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the WLAN market.

WLAN is a computer network that enables data transmission at high speed without the need of wired connection for connectivity between devices. The network is utilized in homes and by enterprises and small and medium-sized enterprises (SMEs) related to multiple sectors, and by government organizations. WLAN overcomes the disadvantages of a wired network of connecting multiple devices over long distances. It helps user to access remote applications and data. WLAN also ensures increased bandwidth, leading to improved performance of network. Data transmission can take place at speeds ranging from 1 to 600 Mbps. WLAN are implemented in two ways: internal WLAN and authorized visitor WLAN.

According to the report, rise in global internet traffic will be a key driver for market

growth. In order to support high volume of data, network operators are upgrading their WLAN networks to keep up with the rising demand. This has led to greater adoption and rise in sales of WLAN devices.
